IRONWOOD

Sculpture for Fire™

Each Ironwood Sculpture for Fire™ is a unique handcrafted work of art from firegear designer Jarrett Bertoncin. Each sculpture is fabricated one at a time allowing the artist to add personal embellishments on each set, ensuring no two sets are the same.

Fabricated from raw steel one piece at a time, each piece includes such details as peeling bark, exposed heartwood, pinecones, leaves and small twigs. Coated in a natural patina built up during the construction process, each set slowly rusts as it ages.

The Ironwood Sculpture for Fire™ features the firegear firestar™ to create the final look.

Ironwood Sculpture for Fire™ is the perfect addition to any indoor or outdoor environment- bringing the charm and warmth of a wood fire with the ease and safety of gas.

Big Flames. Little cost.

IRONWOOD

Sculpture for Fire™

IRONWOOD Sculpture for Fire™ by firegear utilizes both the talents of very skilled artists and the medium of steel to create the most realistic, highly detailed logs possible. This approach creates the most natural looking "gas logs" available. As each set is hand crafted one at a time, not only can the size and shape be tailored to each installation, but each Ironwood™ can be embellished with personal details, details ranging from the number of pinecones to a personalized monogram. Using steel as a medium not only allows for much more delicate detail but also provides a durability not found in other materials.

Because of this durability Ironwood™ is the ideal product for commercial establishments that use their fire features for ten to twenty hours a day. The characteristics of steel as a medium, delicate details, client design input, durability and each sculpture is an original work of art, are all innovations in themselves that set this product in a class of its own.

MATERIALS USED:

Mild Steel: Flat Bar, Round Tube, Rectangular Tube, Square Tube, Square Solid and Round Solid in a variety of sizes.

STEP BY STEP PROCESS:

Each Ironwood™ is built one at a time. The process is started with the client choosing the style of "Feature" logs to be used in the set. At this time the size of the set is determined along with small details such as leaves and pinecones. The Feature logs are roughed out in size and shape to layout the look of the set. Smaller logs and features are then roughed in to fill out the set. At this point bark details are added to the logs, pinecones are constructed (or leaves are added) twigs and pine needles are crafted. All of these components are assembled into the final set. The Ironwood Sculpture for Fire™ is then ready to be placed on top of the firestar™ burner.

AVERAGE LENGTH OF TIME TO PRODUCE UNIT:

The process of creating an Ironwood™ on average takes five weeks from the time the order is received to the time the sculpture is ready for shipping.

The creation of the Ironwood™ utilizes many metal fabrications tools including welders, saws, torches and plasma torches.

SPECIAL FINISH:

This work of art will age beautifully, taking on a natural patina over time.

Each Ironwood Sculpture for Fire™ is a unique handcrafted work of art from firegear designer Jarrett Bertocin.
